End of East Washington <sup>d</sup>	none			--	--	0.464	0.408

<sup>a</sup> Concentrations shown as ppb are parts per billion by volume.

<sup>b</sup> Screening levels were designed to protect people's health and developed for this incident based on an assumed exposure for vinyl chloride of 350 days for one year.

<sup>c</sup> Average of original sample and quality assurance duplicate.

<sup>d</sup> Beginning with Dec 12 samples, these locations were added to capture conditions closer to the rail car removal operations.

<sup>e</sup> U = non detect
